Workforce Development Program  
Software Developer Training & Experience  
Launching Careers In Tech

## Snow College Case Study

### THE CHALLENGE

In 2021 Dr Brad Cook, President of Snow College, asked DevPipeline for help with curriculum, recruitment, and placement in software development. He wanted to increase access to software development education and keep the pathway affordable. He also wanted graduates from our program to have professional certifications.

### THE SOLUTION

DevPipeline specializes in eliminating the gap between education and experience. Our Full-stack Web Development apprenticeship is registered with the US Department of Labor. We offer three stackable, credentialed certifications that cover 120 competencies. As long as people are hungry to learn, and committed to owning their own journey, DevPipeline will attempt to help them achieve their goals.

### BENEFITS

Over a one year period DevPipeline's program achieved a 460% increase in access to software development education and opportunities through Snow College. All graduates are employed in Tech careers. All students were 100% funded through DevPipeline's philanthropic efforts and government grants.

At the announcement of Snow College's partnership with DevPipeline, Dr. Bradley Cook, then President of Snow College had the following to say:

"Snow College is very pleased to partner with DevPipeline in offering in-demand, high tech programs. Both Snow College and DevPipeline are proven leaders in understanding the needs of industry and how to prepare future professionals for dynamic and rewarding careers. We look forward to seeing the future successes of students as they undertake this cutting-edge training."
